

hi, as an xm radio subscriber i think this whole thing is a big joke. if the fm stations can have weather and traffic than why cant we. it is actually more convenient to got ot a station when you need a traffic report than to have music interrupted by traffic and weather. wu=ith all that goes on in this country i think this is the least of our worries and i think we shopuld consider going after more important issues. satelite radio is a great thing why look for drawbacks or fabricate them if we dont have a problem as subscribers than why should anybopdy else . thanks for the oppurtunity to speak out and i wish all of us well in winning this ridiculous battle. thank you janine bohn please reject this and let xm traffic and weather live!!!!
